WHAT I SEE

Real world examples...
WHAT I SEE

- Child and Adolescent Psychiatric Emergency Unit
  BC Children’s Hospital, 2012

- Children aged 4-17, from Emergency Departments

- “Psychiatric Crisis”
  - Aggression
  - Depression / Bipolar
  - Psychosis
  - Anxiety
  - Addiction
  - ** Parent – Child Conflict **
“PARENT-CHILD CONFLICT?”

“Fight with parents...”
- Over something (video game, going out, coming home late, school)
- Which escalates into (argument, fight, punishment)
- Which results in:
  - Suicide threat / statement / behaviour
  - Self-injurious behaviour
  - Running away
  - Physical fight in the home
  - Destruction of property

The “over something” is relatively unimportant.

Too Much of a Good Thing...

COMPULSIVE GAMING
Dr. Matthew Chow and I presented on gaming addiction.

In summary:

a) Games are not classically addictive.

b) Research on “addiction” is shoddy and full of bias

c) Definition of “addiction” probably = “likes playing games”

d) Overdoing anything is bad

e) Balance is good
“MY KID PLAYS TOO MUCH...”

Fight with mother → “I’ll kill myself.”

- Parent overwhelmed, child will not stop playing
  - World of Warcraft, Runescape, obscure F2P MMOs
  - CounterStrike, Call of Duty / Modern Warfare

- Child struggling:
  - Has depression
  - No friends (recently moved schools)
  - Gets teased at school
  - History of physical abuse by grandfather
“MY KID PLAYS TOO MUCH...”

Fight with mother → “I’ll kill myself.”

- Parent overwhelmed, child will not stop playing
  - World of Warcraft, Runescape, obscure F2P MMOs
  - CounterStrike, Call of Duty / Modern Warfare

- Parent struggling:
  - Supervision
  - Purchase of Game / Game Time
  - Inability to set limits / reinforce limits
  - Not understanding their child
  - Very anxious mother, ++ pressure to child

"The Behaviour" is Usually a child’s best effort to succeed

- "My child plays too many video games.”
  Why is my child succeeding with that group?
- "My child hangs out with the wrong crowd.”
  What do games provide that “real life” isn’t?
- "My child stole my Reddit karma.”
  Why is karma so important to my child?
Video games:
- are tremendously varied.
- can be a source of peer social discussion.
- can be learning tools.
- can also be used to avoid responsibilities.
- can be used to avoid development.

## WHY WOULD A CHILD PLAY?

<table>

</tr>
</tbody>
</table>

Now, 90-99% of children play video games

Not playing video games could be:
  - Personal / Parent decision (healthy)
  - Due to other activities (healthy)
  - Indicative of social difficulty
  - Indicative of learning difficulty
  - Indicative of movement difficulty
SUICIDE THINKING AND VIDEO GAME USE

- No Use
- < 1 Hour
- 1 Hour
- 2 Hours
- 3 Hours
- 4 Hours
- 5+ Hours

Suicide Attempt Risk

Hours of Internet / Game Use per school day

Suicide and Life-Threatening Behavior 41(3) June 2011
Overdoing ANYTHING is bad for you:

- Studying
- Sleeping
- Eating
- Dieting
- Exercising
- Collecting stamps
- Video games
Video Games provide:

- Mastery of skills
- Chances to be a hero / play in a story / build / destroy
- Rewards
- Validation
- Now: Social world, exercise, sometimes even $$

A child who struggles with these things in “the real world” will likely seek them out in video games if given the chance.
MATURE CONTENT AND KIDS

Much Ado About Nothing?
KIDS CAN JUST GO BUY THIS STUFF...

FTC Mystery Shopper Audits: 2000-2011

ERSB, 2011
Murder rate, youth, per year (USA)

Youth Committing Murder Rate (per 10,000)

Year

Figure 1.1. Number of student, staff, and nonstudent school-associated violent deaths, and number of homicides and suicides of youth ages 5–18 at school: School years 1992–93 to 2008–09

Number

- Total number of student, staff, and nonstudent school-associated violent deaths
- Homicides of youth ages 5–18 at school
- Suicides of youth ages 5–18 at school

WHY I STRUGGLE WITH “VIOLENT GAMES CAUSE VIOLENT KIDS”

- The research is tremendously biased, self-referential, and very unscientific.
- Scientists lose credibility when they say “it is beyond doubt.”
- Video games are interactive, social, can be done with parents, can be put into context.
- Violent games can be prosocial, and non-violent games can be very asocial.
- Kids can separate fantasy from reality (EARLY)

Ferguson 2011; Hall et al. 2011
Violence in the Media - Psychologists Help Protect Children from Harmful Effects

Decades of psychological research confirms that media violence can increase aggression.

Findings

Virtually since the dawn of television, parents, teachers, legislators, and mental health professionals have been concerned about the content of television programs and its impact, particularly on children. Of special concern has been the portrayal of violence, especially given psychologist Albert Bandura's work on social learning and the tendency of children to imitate what they see. As a result of 15 years of consistently disturbing findings about the violent content of children's programs, the Surgeon General's Scientific Advisory Committee on Television and Social Behavior was formed in 1969 to assess the impact of violence on the attitudes, values and behavior of viewers. The resulting Surgeon General's report and a follow-up report in 1982 by the National Institute of Mental Health identify these major effects of seeing violence on television:

- Children may become less sensitive to the pain and suffering of others
- Children may be more fearful of the world around them
- Children may be more likely to behave in aggressive or harmful ways toward others

Research by psychologists L. Rowell Huesmann, Leonard Eron and others found that children who watched many hours of violence on television when they were in elementary school tended to also show a higher level of aggressive behavior when they became teenagers. By observing these youngsters into adulthood, Drs. Huesmann and Eron found that the ones who'd watched a lot of TV violence when they were eight years old were more likely to be arrested and prosecuted for criminal acts as adults. Interestingly, being aggressive as a child did not predict watching more violent TV as a teenager, suggesting that TV watching may more often be a cause rather than a consequence of aggressive behavior.

Violent video games are a more recent phenomenon; therefore there is less research on their effects. However, research by psychologist Craig A. Anderson and others shows that playing violent video games can increase a person's aggressive thoughts, feelings and behavior both in laboratory settings and in actual life. In fact, a study by Dr. Anderson in 2000 suggests that violent video games may be more harmful than violent television and movies because they are interactive, very engrossing and require the player to identify with the aggressor.

Dr. Anderson and other researchers are also looking into how violent music lyrics affect children and adults. In a 2003 study involving college students, Anderson found that songs with violent lyrics increased aggression related thoughts and emotions...
WHY THE “SCIENCE” IS SO FAR OFF BASE

- Poorly defined studies of aggression
- Less reliable aggression definitions = more positive findings
- Contributing causes not accounted for
  - Environment, ecology of the home, intelligence, antisocial traits, etc.
- Studies conclude “children’s development makes them more susceptible”, yet most studies are done in college-age students
- Significant Bias in the Literature
  - Publication Bias
  - Confirmation Bias
  - Political / Personal Bias

Ferguson 2011; Hall et al. 2011
THE GOOD NEWS... IT’S SHIFTING

- Christopher Ferguson (Texas A&M) – publishing excellent, peer-reviewed results in non-APA dominated publications
- SCOTUS has rejected the “games cause violence” evidence presented by the “recognized experts”
- The Australian Government recently did the same
- There is developing clear direction that the effects of violent media on children are modest at best, and likely very small.
HOW PARENTS SHOULD SEE GAMES

This is Complicated!
GAMES ARE...

- Great teachers
- Great attention-getters
- Great distractions
- Great timewasters
- Great sleep-destroyers
- Great motivation
- Great tools
- Great moneymakers
GAMES ARE...

- Great teachers  
  (what do you learn?)
- Great attention-getters  
  (what are you paying attention to?)
- Great distractions  
  (what are you missing?)
- Great timewasters  
  (what else could you do?)
- Great sleep-destroyers  
  (how tired are you?)
- Great motivation  
  (what do you want to do?)
- Great tools  
  (can this help you?)
- Great moneymakers  
  (are you being manipulated?)
WHAT CAN PARENTS DO?
TO ALL PARENTS

Parenting is tough:

At some point, your child will be:

1. Dependent completely
2. Dependent mostly
3. Independent sometimes
4. Independent mostly
5. Defiant sometimes
6. Defiant mostly
WHAT CAN PARENTS DO?

- Know the Ratings, Know the Game
- Encourage Varied Experience
- Play or watch alongside your child
- Real-world responsibilities
AGE-APPROPRIATE GAMING

Kirby’s Return to Dreamland © Nintendo
AGE-APPROPRIATE GAMING

Super Street Fighter IV © Capcom
AGE-APPROPRIATE GAMING
AGE-APPROPRIATE GAMING
ENCOURAGE VARIED EXPERIENCE

- Different types of games
- Active Gaming
- Doing things non-game related
- Develop other skills
- Improve your knowledge of child’s world
- Develop common experience
- Foster the “parent is a guide” role
- Give child confidence
- Be aware of social world online
REAL WORLD RESPONSIBILITIES

- Balance, Balance, Balance
- Other things must be done
- Gaming is a luxury
- Foster the “parent is the provider” role
THANK YOU!
